

The young talent Total Award to Dr. Enrico Da Como

Dr. Enrico Da Como from the Photonics and Optoelectronics Group of LMU Munich, receives one of "The young talent Total Awards 2011". The prize, that will be received at the Spring meeting of the European Materials Research Society in Nice (France), has been awarded for his work on organic photovoltaics started with the priority program SPP1355 on elementary processes in organic photovoltaics. The team of Dr. Enrico Da Como in Munich is working in collaboration with the group of Dr. Elizabeth von Hauff at University of Oldenburg in order to understand recombination processes via charge transfer excitons, their impact on solar cells and the design of new device architectures based on doped layers (Project 6: p-B-n organic junctions for efficient photovoltaics).
